AGC Total Knee System - Biomet

The Anatomic Graduated Component (AGC) total knee system from Biomet was first implanted in 1983. This is a minimally conforming “flat on flat” design attributed to Ritter. The system includes Universal and sided cobalt-chrome femoral components. The tibial component is available as one piece or modular variants, and has a stem which has an I-shaped cross-section.

Biomet | AGC Knee System

AGC Total Knee System Beginning with the AGC®, and continuing with the Maxim® and Ascent[], Biomet's total knee systems have a rich clinical heritage. Design Rationale: Tibio-femoral articulation allows for full interchangeability between femoral and tibial components.

www.biomet.co.uk. The Dual Articular Knee has been in use since 1991 and offers a flexible reconstructive solution for total knee surgery; for both revision and complex primary indications where high degree of varus/valgus support is required1. The key benefits offered by the Dual Articular include the increased varus/valgus support provided by an extended intercondylar post on the tibial bearing.

Dual Articular[] 2000 - Biomet

Introduced in 1983, the AGC (Anatomically Graduated Components) Total Knee is a proven clinical success unsurpassed by any other knee system available today. Ritter et al reported a 97.8% tibiofemoral survival rate for the AGC Knee at 20 years. independent data from the Swedish Knee Study reported a cumulative survival rate of 96% at 10 years for 14,307 AGC total knee arthroplasties .
