[(Conservation Is Our Government Now: The Politics of ...

In Conservation is our Government Now, Paige West eloquently recounts the history of an integrated conservation and development project in the Crater Mountain region of Papua New Guinea. Her alternately poetic and densely theoretic account does far more, however, than merely chronicle the history of the project.

A significant contribution to political ecology, Conservation Is Our Government Now is an ethnographic examination of the history and social effects of conservation and development efforts in Papua New Guinea. Drawing on extensive fieldwork conducted over a period of seven years, Paige West focuses on the Crater Mountain Wildlife Management Area, the site of a biodiversity conservation project implemented between 1994 and 1999. She describes the interactions between those who ran the program--mostly ngo workers--and the Gimi people who live in the forests surrounding Crater Mountain. West shows that throughout the project there was a profound disconnect between the goals of the two groups. The ngo workers thought that they would encourage conservation and cultivate development by teaching Gimi to value biodiversity as an economic resource. The villagers expected that in exchange for the land, labor, food, and friendship they offered the conservation workers, they would receive benefits, such as medicine and technology. In the end, the divergent nature of each group's expectations led to disappointment for both. West reveals how every aspect of the Crater Mountain Wildlife Management Area--including ideas of space, place, environment, and society--was socially produced, created by changing configurations of ideas, actions, and material relations not only in Papua New Guinea but also in other locations around the world. Complicating many of the assumptions about nature, culture, and development underlying contemporary conservation efforts, Conservation Is Our Government Now demonstrates the unique capacity of ethnography to illuminate the relationship between the global and the local, between transnational processes and individual lives.

DIVethnography and critique of conservationist efforts in Papua New Guinea, focusing on the misunderstandings, mistranslations, and complexities that arise in the discourse between conservation/biologists and local people./div

Nearly 90 percent of the earth's land surface is directly affected by human infrastructure and activities, yet less than 5 percent is legally "protected" for biodiversity conservation--and even most large protected areas have people living inside their boundaries. In all but a small fraction of the earth's land area, then, conservation and people must coexist. Conservation is a resource for all those who aim to reconcile biodiversity with human livelihoods. It traces the historical roots of modern conservation thought and practice, and explores current perspectives from evolutionary and community ecology, conservation biology, anthropology, political ecology, economics, and policy. The authors examine a suite of conservation strategies and perspectives from around the world, highlighting the most innovative and promising avenues for future efforts. Exploring, highlighting, and bridging gaps between the social and natural sciences as applied in the practice of conservation, this book provides a broad, practically oriented view. It is essential reading for anyone involved in the conservation process--from academic conservation biology to the management of protected areas, rural livelihood development to poverty alleviation, and from community-based natural resource management to national and global policymaking.

In an era of market triumphalism, this book probes the social and environmental consequences of market-linked nature conservation schemes. Rather than supporting a new anti-market orthodoxy, Charles Zerner and colleagues assert that there is no universal entity, "the market." Analysis and remedies must be based on broader considerations of history, culture, and geography in order to establish meaningful and lasting changes in policy and practice. Original case studies from Asia, Latin America, Africa, and the South Pacific focus on topics as diverse as ecotourism, bioprospecting, oil extraction, cyanide fishing, timber extraction, and property rights. The cases position concerns about biodiversity conservation and resource management within social justice and legal perspectives, providing new insights for students, scholars, policy professionals and donor/foundations engaged in international conservation and social justice.

A new approach to writing culture has arrived: multispecies ethnography. Plants, animals, fungi, and microbes appear alongside humans in this singular book about natural and cultural history. Anthropologists have collaborated with artists and biological scientists to illuminate how diverse organisms are entangled in political, economic, and cultural systems. Contributions from influential writers and scholars, such as Dorion Sagan, Karen Barad, Donna Haraway, and Anna Lowenhaupt Tsing, are featured along with essays by emergent artists and cultural anthropologists. Delectable mushrooms flourishing in the aftermath of ecological disaster, microbial cultures enlivening the politics and value of food, and nascent life forms running wild in the age of biotechnology all figure in this curated collection of essays and artifacts. Recipes provide instructions on how to cook acorn mush, make cheese out of human milk, and enliven forests after they have been clear-cut. The Multispecies Salon investigates messianic dreams, environmental nightmares, and modest sites of biocultural hope. For additional materials see the companion website: www.multispecies-salon.org/ Contributors. Karen Barad, Caitlin Berrigan, Karin Bolender, Maria Brodine, Brandon Costelloe-Kuehn, David S. Edmunds, Christine Hamilton, Donna J. Haraway, Stefan Helmreich, Angela James, Lindsay Kelley, Eben Kirksey, Linda Noel, Heather Paxson, Nathan Rich, Anna Rodriguez, Dorion Sagan, Craig Schuetz, Nicholas Shapiro, Miriam Simun, Kim TallBear, Anna Lowenhaupt Tsing

Earth Beings is the fruit of Marisol de la Cadena's decade-long conversations with Mariano and Nazario Turpo, father and son, runakuna or Quechua people. Concerned with the mutual entanglements of indigenous and nonindigenous worlds, and the partial connections between them, de la Cadena presents how the Turpos' indigenous ways of knowing and being include and exceed modern and nonmodern practices. Her discussion of indigenous political strategies--a realm that need not abide by binary logics--reconfigures how to think about and question modern politics, while pushing her readers to think beyond "hybridity" and toward translation, communication that accepts incommensurability, and mutual difference as conditions for ethnography to work.

International peace parks--transnational conservation areas established and managed by two or more countries--have become a popular way of protecting biodiversity while promoting international cooperation and regional development. In Transforming the Frontier, Bram Büscher shows how cross-border conservation neatly reflects the neoliberal political economy in which it developed. Based on extensive research in southern Africa with the Maloti-Drakensberg Transfrontier Conservation and Development Project, Büscher explains how the successful promotion of transfrontier conservation as a "win-win" solution happens not only in spite of troubling contradictions and problems, but indeed because of them. This is what he refers to as the "politics of neoliberal conservation," which receives its strength from effectively combining strategies of consensus, antipolitics, and marketing. Drawing on long-term, multilevel ethnographic research, Büscher argues that transfrontier conservation projects are not as concerned with on-the-ground development as they are purported to be. Instead, they are reframing environmental protection and sustainable development to fit an increasingly contradictory world order.

This well-illustrated book highlights freshwater mussels' fabulous diversity, amazing array of often bizarre ecological adaptations and their dire conservation plight. Summarizing and synthesizing historical and contemporary information as well as original research and analysis, the book describes the diverse array of mussel life history strategies and builds a cohesive narrative culminating in the development of explicit frameworks to explain pervasive patterns in mussel ecology. The fascinating and colorful role of mussels in human society is also described in detail, including the little-known pearl button industry of the early 1900s and the wild and often violent shell harvest of the 1990s. The final chapter details humans' efforts to save these fascinating animals and gives a prognosis for the future of the North American fauna. The book provides the first comprehensive review of mussel ecology and conservation for scientists,

natural resource professionals, students and natural history enthusiasts.

The Will to Improve is a remarkable account of development in action. Focusing on attempts to improve landscapes and livelihoods in Indonesia, Tania Murray Li carefully exposes the practices that enable experts to diagnose problems and devise interventions, and the agency of people whose conduct is targeted for reform. Deftly integrating theory, ethnography, and history, she illuminates the work of colonial officials and missionaries; specialists in agriculture, hygiene, and credit; and political activists with their own schemes for guiding villagers toward better ways of life. She examines donor-funded initiatives that seek to integrate conservation with development through the participation of communities, and a one-billion-dollar program designed by the World Bank to optimize the social capital of villagers, inculcate new habits of competition and choice, and remake society from the bottom up. Demonstrating that the “will to improve” has a long and troubled history, Li identifies enduring continuities from the colonial period to the present. She explores the tools experts have used to set the conditions for reform—tools that combine the reshaping of desires with applications of force. Attending in detail to the highlands of Sulawesi, she shows how a series of interventions entangled with one another and tracks their results, ranging from wealth to famine, from compliance to political mobilization, and from new solidarities to oppositional identities and violent attack. The Will to Improve is an engaging read—conceptually innovative, empirically rich, and alive with the actions and reflections of the targets of improvement, people with their own critical analyses of the problems that beset them.
