Preceded by Neuro-ophthalmology / Lanning B. Kline, Rod Foroozan, Frank J. Bajandas. 7th ed. c2013.

Praise for this book:[Five stars] Provide[s] succinct and easy to understand information with excellent illustrations...the wealth of color illustrations [are] invaluable to students learning about these disorders.--Doody's ReviewWith nearly 900 illustrations and the combined 40-year experience of the authors, Neuro-Ophthalmology Illustrated serves as an atlas and a source of concise clinical information on the entire field. From anatomy and pathophysiology to diagnosis and management, the book provides a unique approach to thinking about, assessing, and treating neuro-ophthalmic disorders. It offers a how-to on performing the essential examination, and covers disorders of the visual afferent system, the pupil, ocular motor efferent systems, and the orbit and lid. The authors also point out the important neuro-ophthalmologic manifestations associated with common neurologic and systemic disorders.Highlights: Offers a basic introduction to anatomy, physiology, and examination of the eye for neurology students Teaches brain anatomy and the fundamentals of neuro-imaging to ophthalmologists Provides the coherent approach of two master teachers in the field Begins each chapter with a quick outline of contents, and concludes with a comprehensive index Features a handy examination chart and near card for easy reference **A portable atlas, manual, and study guide in one, Neuro-Ophthalmology Illustrated** is perfect for residents preparing for board examinations in ophthalmology, neurology and neurosurgery. Practitioners and instructors of neuro-ophthalmology will also find this highly visual pocketbook a useful reference in their practice and classroom.

"Developed at Philadelphia's famed Wills Eye Institute, the series presents unmistakable guidelines for the differential diagnosis and treatment of the full range of ophthalmic problems. For each condition there are photographs coupled with salient points of epidemiology, history, physical examination, differential diagnosis, laboratory and special examinations, disease course, and up-to-date treatments. The Series is a unique combination of text, quick reference, and color atlas, covering every essential sub-specialty in Ophthalmology including pediatrics. Each title features more than 150 color illustrations throughout and a short, succinct format which in most cases, includes: Epidemiology and Etiology, History, Physical Examination, Differential Diagnosis, Laboratory and Special Examinations, Diagnosis, Prognosis, and Management. The book is designed as an aid to the diagnosis and management of Vitreoretinal disease in the care of patients and as a resource for the student and trainee"--Provided by publisher.

This book is a practical, symptom-based, 'how-to' guide to neuro-ophthalmology and acquired strabismus for all trainee and practising ophthalmologists. Each chapter focusses on a specific clinical symptom and includes an introduction to the clinical assessment of a symptom; an examination checklist; a management flowchart to be followed; clinical diagnostic criteria checklists; and further information on the diseases that can cause the symptom with a brief discussion of appropriate management. A practical and accessible handbook for the ophthalmologist without a specialist interest in neuro-ophthalmology and acquired strabismus. The text simplifies a subject which is often a cause of litigation against practising ophthalmologists and exam failure for trainees and residents. The book aids diagnosis in a field in which mistakes may lead to medico-legal problems, e.g. brain tumours presenting with blurred or double vision. The book leads the reader from the symptom, through a series of simple but safe flowcharts and check-lists, to the diagnosis or the tests which need to be ordered. The first chapter presents 20 'golden rules' to keep you and your patients out of trouble. A revised text with some new illustrations brings this highly-praised book up to date. New online videos demonstrate abnormal eye movements, eyelid problems and pupil abnormalities.

A best-selling source of compact, authoritative guidance on the treatment of ocular disorders in a variety of settings, The Wills Eye Manual, 8th Edition, is the comprehensive, high-yield reference of choice for both trainees and seasoned practitioners. It provides highly illustrated information on more than 200 ophthalmic conditions along with proven clinical recommendations from initial diagnosis through extended treatment. The consistent, bulleted outline format makes it ideal for portability and quick reference.

Pediatric Neuroophthalmology details the diagnostic criteria, current concepts of pathogenesis, neuroradiological correlates, and clinical management of a large group of neuroophthalmic disorders that present in childhood. Surprisingly distinct from neuroophthalmic disorders afflicting adults, this set of diseases falls between the cracks of most ophthalmology training, and thus, warrants a practical, clinical guide for the practitioner in ophthalmology - the neuroophthalmologist, pediatric ophthalmologist, general ophthalmologist - as well as neurologists and for residents. The authors, leading pediatric ophthalmologists, have taken this difficult subject matter and developed an accessible, user-friendly manual with a detailed approach to the recognition, differential diagnosis, and management of pediatric neuroophthalmologic disorders.

Designed to maximize easy retention and quick recall, Review of Ophthalmology, 3rd Edition, by Drs. Neil J. Friedman, Peter K. Kaiser, and William B. Trattler, is the best-selling review book you can trust to get you successfully through your exams. An efficient, easy-to-digest format distills key information into highly relevant bullet points. You'll quickly master what you need to know in all subspecialty areas, including the latest information on today's standard diagnostic techniques, medical treatments, and surgical options. Covers the most important and relevant aspects of each topic in a concise, bulleted format for easy recall and effective exam preparation. Highlights the text with hundreds of clinical and histological images, OCT and other current imaging methods, anatomic details, common ophthalmic test findings, and more. Presents the findings of key clinical studies with which you are expected to be familiar. Provides thoroughly revised content in every chapter, with extensive updates on new imaging standards and diagnosis and treatment for eye disorders. Test your understanding of essential information with an expanded collection of review questions following every chapter.
