and identified by means of paper chromatography. The position of the amino acids in the chromatogram can be detected by spraying with ninhydrin, which reacts with amino acids to yield highly coloured products (purple). Paper chromatography is a method of separating and analyzing a mixture For example, simple paper, chromatography can be used to separate a mixture of dyes. The filter paper, which contains a thin film of water trapped on it ...

Separation of amino acids by paper chromatography

Background Amino acids are the building blocks of peptides and proteins. They possess two functional groups—the carboxylic acid group gives the acidic character, and the amino group provides the basic character. The common structure of all amino acids is $\text{H R} - \text{C} - \text{COOH NH}_2$ The R represents ...

Chromatographic Separation of Amino acids: The present experiment employs the technique of thin layer chromatography to separate the amino acids in a given mixture. All 20 of the common amino acids [standard amino acids] are α -amino acids. They have a carboxyl group and an amino group bonded to the same carbon atom (the α -carbon).

The findings of this paper chromatography experiment clearly shows the importance of paper chromatography in helping to identify unknown amino acids or analyze any other relevant mixtures that has properties of being separated by the paper. The theory of adhesion and cohesion plays an important part in the separation.

SEPARATION OF AMINO ACIDS BY PAPER CHROMATOGRAPHY

In paper chromatography, the stationary cellulose phase is more polar than the mobile organic phase. Identifying the compounds: The ratio of the distance traveled by a component (i.e. amino acid) to that traveled by the solvent front, both measured from the marked point of the application of the mixture, is called the “ Resolution front (Rf) ” value for that component.

Procedure

Paper chromatography is especially useful in characterizing amino acids. The different amino acids move at differing rates on the paper because of differences in their R groups. The rate of movement of a biomolecule during paper chromatography is reported as its relative mobility (R_f).

Paper Chromatography of Amino Acids

Paper chromatography is specially used for the separation of a mixture having polar and non-polar compounds. For separation of amino acids. It is used to determine organic compounds, biochemicals in urine, etc. In the pharma sector, it is used for the
