Step 1: Identify the Method. Read the study you want to evaluate carefully and try to identify the method that is used. How was the data gathered and analyzed? Was it a true experiment, a correlational study, a case study, a survey, an observation, etc.? Perhaps it was a twin study, a meta-analysis, or a longitudinal study.

introspection (as used by Wilhelm Wundt) due to its subjective and unscientific nature. Humanistic psychologist Carl Rogers believes that the use of laboratory experiments by cognitive psychology have low ecological validity and create an artificial environment due to the control over variables .

Cognitive Approach | Simply Psychology
The experimental method involves the manipulation of variables to establish cause and effect relationships. The key features are controlled methods and the random allocation of participants into controlled and experimental groups. An experiment is an investigation in which a hypothesis is scientifically tested.
